ALIGNMENTS

```
This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                 Cyclophilin B; human; tumour antigen peptide; cytotoxic T-cell; CTL; HLA antigen; diagnosis; tumour; therapy.

                                                                                                                                                                                                                                                                                                 This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cyclophilin B; human; tumour antigen peptide; cytotoxic T-cell; CTL; HLA antigen; diagnosis; tumour; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.

This invention describes the novel use of interferons (IFNS) or DNAS

capable of expressing the interferons and/or antigenic proteins (AP),

antigenic peptides derived from the proteins or DNAs capable of

expressing the antigeners or peptides, in the manufacture of an

agent for induction of antigen-specific T cells. The products of the

invention have virucide and cytostatic activity and can be used for gene

therapy or as inducers of antigen-specific T cells. The action of

therapy or as inducers of antigen-specific T cells. The action of

T cell (CTL) by administering an antigenic peptide in an incomplete

Freund's adjuvant (IFA) emulsion preparation form was evaluated. IFNS (or

DNA encoding IFNS) are useful in the manufacture of a medicament for

inducing antigen-specific T cells in an individual who has been

administered with AP (or DNA encoding AP) or vice versa. The medicament

is useful for the treatment or prophylaxis of a tumor or a viral
                                                                                                                                                                0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ij.

T
This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                  Gaps

This invention describes the novel use of interferons (IFNs) or DNAs capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigenic proteins or peptides, in the manufacture of an agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IFN-alpha) in a system for inducing specific cytotoxic real (CTL) by administering an antigenic peptide in an incomplete recell (CTL) by administering an antigenic peptide in an incomplete of recell (CTL) by administering an incomplete of received in the manufacture of a medicament for inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral infectious disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of antigenic proteins, peptides, interferon or their encoding DNA, in the manufacture of an agent for the induction of antigen-specific T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The peptides recognising cancer cells with tumour specific CTLs are selected from: (1) peptides of sequences (AAG68066 to AAG68069); (2) peptides containing the above mentioned sequences; (3) peptides having 70 % or more of homogeneity with the above mentioned sequences; and (4) peptides with one or more deleted, substituted, added or inserted amino acid(s) of the above mentioned sequences, particularly those having recognising property due to HLA-A2402 binding CTL, especially having at least 5 amino acids, used for medicine, particularly anticancer agents, derived from antitumour antigenic peptides of 1ck, src family, SART-1, SART-3 or cyclophilin B genes. The antitumour peptides have cytostatic activities. The peptides are used for the treatment of cancer. The peptides cause activation of CTL in cancer patients. The present sequence represents a peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                             New peptides for recognizing cancer cells with tumor specific cytotoxic Tlymphocytes and for treating cancer.
                                                                                                Antitumour; cancer; cancer cell recognition; antigenic; CTL; lck; src; tumour specific cytotoxic T lymphocyte; anticancer; SART-1; SART-3; cyclophilin B gene; HLA-A2402.

The invention relates to a composition (I) comprising an immune effector cell and a cell penetrating peptide (CPP) associated with an antigen or antibody. Also included are (1) a vaccine comprising (I), CPP associated with an antigen, and a pharmaceutically acceptable carrier and (2) preparing a composition for a disease, by providing (I) and CPP associated with an antigen for disease, and introducing the antigeners of associated CPP to (I), where antigen enters into the cell. The antigens are, for example, tumour antigen derived epitopes recognised by tumour control of infiltrating lymphocytes (TIL) of HLA (human leukocyte antigen) class I or II. The composition is useful for enhancing immunity in an animal to a disease, by administering a mature dendritic cell comprising CPP associated with an antigen to disease, to the animal, such that following the administration, animal is protected from disease, where the animal comprises both CD4+ and CD8+ T cells. It is also useful for treating a disease (e.g. cancer, tumour, melanoma, thymoma, lymphoma, sarcoma, lung cancer, non-Hodgkin's lymphoma, leukaemia, Hodgkin's lymphoma, uterine cancer, non-Hodgkin's lymphoma, leukaemia, gancer, adenocarcinoma, haset cancer, and cancer, kidney cancer, adenocarcinoma, cancer, and cancer, adenocarcinoma, cancer, and cancer, adenocarcinoma, cancer, and cancer, adenocarcinoma, cancer, and cancer, adenocarcinoma, cancer, and cancer, adenocarcinoma, cancer, accertael cancer, and cancer, and cancer, and cancer, adenocarcinoma, cancer, adenocarcinoma, cancer, and cancer, and cancer, and cancer, and cancer, adenocarcinoma, and cancer, and cancer, and cancer, adenocarcinoma, cancer, and cancer, adenocarcinoma, and cancer, and canc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antigen specific T-cell; detection; diagnosis; cancer specific T-cell; cancer; tumour; cervical cancer; prostate cancer; cellular immunity; immune therapy; cytostatic; immunostimulant; vaccine; antigenic peptide; human; human leukocyte antigen; HLA-A24 epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          breast cancer, prostate cancer, ovarian cancer and pancreatic cancer). The animal is further subjected to a cancer treatment including surgery, radiation, chemotherapy or gene therapy. The administration of (1), preferably dendritic cell is prior to, subsequent to or concurrent with, the cancer treatment. The present sequence is a tumour antigen derived epitope for inclusion in the composition of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to allergic reaction suppressors, comprising a peptide which originates from the same antigenic substance as the antigenic substance inducing the (peptide-originated) allergic reaction, and containing an epitope different from the epitope participating in the induction of the allergic reaction and yet dos not induce the allergic reaction. The desensitizers or allergic reaction suppressors are useful for treating and preventing type I allergic diseases and in cancer vaccines for preventing or treating cancer. The allergic reaction suppressors are also useful for suppressing an allergic reaction or reducing immunoglobulin E antibody production, and for desensitization to antigens. This sequence represents a peptide used in the invention and corresponds to amino acids 91-99 of the cyclophilin B protein with the phe at position 92 replaced by a Tyr.
                                               Desensitizers or allergic reaction suppressors containing peptides originating from the same antigenic substances as reaction-inducing substances, useful for preventing or treating type I allergic diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                             The invention relates to a method for the detection of antigen specific T -cells in a blood sample involving the use of a plurality of antigenic peptides. The method comprises sampling of peripheral blood monocytes; stimulation of the collected peripheral blood monocytes with antigens without direct use of antigen presenting cells; and detection of T-cells specific to the antigen in the stimulated monocytes. The method is particularly used for the detection of cancer as it can be used in semi-quantitative determination of cancer specific T-cells. It can also be used for cancer vaccine therapy for patients with cervical or prostate cancer. The method can additionally be used to monitor of cellular in minimal the semi-cancer. The method can additionally be used to monitor of cellular in minimal than the semi-cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytostatic; antiallergic; vaccine; allergic reaction suppressor; antigen; allergy; epitope; cancer; immunoglobulin E antibody; desensitization; cyclophilin B.
                                                                                                                                                                                                                     A detection method of antigen specific T-cells, comprises the use of plural antigenic peptides, useful in semi-quantitative determination of cancer specific T-cell frequencies and for monitoring cellular immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunity and cancer immune therapy by detection of specific T-cell
frequencies. Sequences ABR84367-ABR84380 represent HLA-A24 (human
leukocyte antigen) peptides of human origin used in an example from the

                                                                                                                                                                                                          ·.
peptide which originates from the same antigenic substance as the antigenic substance inducing the (peptide-originated) allergic reaction, and containing an epitope different from the epitope participating in the induction of the allergic reaction and yet dos not induce the allergic reaction. The desensitizers or allergic reaction suppressors are useful for treating and preventing type I allergic diseases and in cancer vaccines for preventing or treating cancer. The allergic reaction suppressors are also useful for suppressing an allergic reaction or reducing immunoglobulin B antibody production, and for desensitization to antigens. This sequence represents a peptide used in the invention and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a cell that differentiates into a metastatic cancer cell, useful for preventing metastatic cancer, comprises identifying a mutated fibronectin in the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amino
                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises a method for identifying a cell that will differentiate into a metastatic cancer cell, the method involves identifying a mutated fibronectin in the cell. The method of the invention is useful for preventing metastatic cancer. The present acid sequence represents a Class I HLA-restricted widely expressed
                                                                                                                                                                                                          .;
                                                                                                                                corresponds to amino acids 91-99 of the cyclophilin B protein
                                                                                                                                                                                                                                                                                                                                                                                                                           metastatic cancer cell differentiation; mutated fibronectin; metastatic cancer; class I HLA-restricted; widely antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score 37; DB 8; Length 9;

```
Ö
This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                             Rb-interacting zinc finger; RIZ; retinoblastoma; heart disease; cell proliferation; cell differentiation; tissue repair; transcription regulator; breast cancer; gene therapy; melanoma; neuroblastoma; leukaemia; Parkinson's disease; Huntingdon's disease; Alzheimer's disease; paralysis; motor neurone disorder; cel.

                                                                                                                                                                                                                                                   Reducing the growth of tumor cell having mammalian retinoblastoma protein -interacting zinc finger proteins in a subject, comprises administering nucleic acid molecule encoding RIZ at or adjacent to the site of tumor.
                                                                                                                                                                                                                                                                                                                                                     The invention describes a method of reducing growth of a tumour cell having a mutant mammalian retinoblastoma (Rb) protein-interacting zinc finger (RIZ) protein in a subject The method comprises administering a nucleic acid molecule (I) encoding RIZ at or adjacent to tumour site. (I) is administered at the site of the tumour. The method is useful for reducing the growth of a tumour cell e.g. neuroblastoma or melanoma cell having mutant RIZ protein. The method is useful for inducing growth of a cardiac cell or a neuronal cell in a subject, and for effecting normal growth control to a tumour cell or causing differentiation of tumour cells. This is the amino acid sequence of an adenovirus crl domain used in a comparison with the cel domain of RIZ protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

Sequence 75, Application US/08399411

Patent No. 5831008

GENERAL INFORMATION:

APPLICANT: Huang, Shi

TITLE OF INVENTION: Retinoblastoma Proteins

TITLE OF INVENTION: Zinc Finger Proteins

NUMBER OF SEQUENCES: 93

CORRESPONDENCE ADDRESS:

ADDRESSEE: Campbell and Flores

STREET: 4370 La Jolla Village Drive, Suite 700

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-08-215-805A-58

Sequence 58, Application US/08215805A

Patent No. 5559008

GENERAL INFORMATION:
TITLE OF INVENTION: LEUKOTOXIN GENE FROM PASTEURELLA

TITLE OF INVENTION: SUIS

NUMBER OF SEQUENCES: 84

CORRESPONDENCE ADDRESS:
ADDRESSEE: Nixon, Hargrave, Devans & Doyle
STREET: Clinton Square, P.O. Box 1051

CITY: Rochester
STATE: New York

COUNTRY: USA

ZIP: 14603

ZIP: 14603

ZIP: 14603
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ZIP: 14603

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/215,805A
FILING DATE: 22-MAR-1994
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Timian, Susan J.
REGISTRATION NUMBER: 34,103
REFERENCE/DOCKET NUMBER: 19603/61 (D-1329A)

Sequence 35, Application US/09912787

Patent No. US20020119149A1

GENERAL INFORMATION:

APPLICANT: JAKOBSEN, Bent Karsten

TITLE OF INVENTION: Multivalent T Cell Receptor Complexes

FILE REFERENCE: 102286.410DIV

CURRENT APPLICATION NUMBER: US/09/912,787

CURRENT FILING DATE: 2001-07-25

PRIOR FILING DATE: 1999-06-17

PRIOR APPLICATION NUMBER: PCT/GB99 01583

PRIOR FILING DATE: 1999-05-19

PRIOR FILING DATE: 1998-05-19

PRIOR FILING DATE: 1998-05-19

PRIOR FILING DATE: 1998-05-19

PRIOR FILING DATE: 1998-09-29

NUMBER OF SEQ ID NOS: 85

A; Cross-references: UNIPROT: Q7M3C5
C; Comment: This peptide induces DNA synthesis in immature thymocytes, but not peripheral in a variety of immunoassays.
C; Comment: This peptide was isolated in two forms. One form contained the pyrrolidone can r form (thymocyte growth peptide) contains a large, non-peptide blocking group with a high sympactamily: thymic factor
C; Superfamily: thymic factor
C; Keywords: blocked amino end; pyroglutamic acid
C; Keywords: blocked amino end (Glx) (in FTS) #status experimental
F; I/Modified site: blocked amino end (Glx) (in thymocyte growth peptide) #status experime

D37196
bradykinin-potentiating peptide 4 - island jararaca
C; Species: Bothrops insularis (island jararaca)
C; Date: 14-Fb-1992 #sequence_revision 01-Dec-1992 #text_change 09-Jul-2004
C; Accession: D37196
R; Cintra, A.C.O.; Vieira, C.A.; Giglio, J.R.
J. Protein Chem. 9, 221-227, 1990
A; Title: Primary structure and biological activity of bradykinin potentiating peptides facence number: A37196; MUID:90351557; PMID:2386615
A; Accession: D37196
A; Status: preliminary
A; Molecule type: protein
A; Residues: 1-11 < CIN>
A; CIN>
A; Conserver experiments
C; Keywords: pyroglutamic acid
F; 1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
S57575
T cell receptor V-J junctional alpha chain region - human (fragment)
C; Species: Homo sapiens (man)
C; Date: 19-Oct-1995 #sequence_revision 17-Nov-1995 #text_change 05-Nov-1999
C; Accession: S57575
R; Burrows, S.R.; Silins, S.L.; Moss, D.J.; Khanna, R.; Misko, I.S.; Argaet, V.P.
submitted to the EMBL Data Library, June 1995
A; Description: T cell receptor repertoire for a viral epitope in humans is diversified A; Reference number: S57494
A; Recession: S57575
A; Ratus: preliminary
A; Molecule type: mRNA
A; Residues: 1-11 < BUR>
A; Residues: 1-11 < BUR>
A; Cross-references: EMBL: Z49953; NID: G887510; PIDN: CAA90224.1; PID: G887511
C; Keywords: T-cell receptor

### ALIGNMENTS

```
This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                 Cyclophilin B; human; tumour antigen peptide; cytotoxic T-cell; CTL; HLA antigen; diagnosis; tumour; therapy.
                                                                                                                                                                                                                                                                                                                                                                           Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 50; DB 3; Length 9; ilarity 100.0%; Pred. This invention describes the novel use of interferons (IFNS) or DNAs capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigeners or peptides, in the manufacture of an agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IFN-alpha) in a system for inducing specific cytotoxic T cell (CTL) by administering an antigenic peptide in an incomplete Freund's adjuvant (IFNA) emulsion preparation form was evaluated. IFNS (DNA encoding IFNS) are useful in the manufacture of a medicament for inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of antigenic proteins, peptides, interferon or their encoding DNA, in the manufacture of an agent for the induction of antigen-specific {\tt T}
                                                                                                                                                            Tumor antigenic peptide; interferon; IFN; antigen-specific T cell; virucide; cytostatic; gene therapy; IFN-alpha; cytotoxic T cell; viral infectious disease; cyclophilin B; human.
                                                                                                                               Human cyclophilin B derived tumor antigenic peptide SEQ ID 32.

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigenic proteins or peptides, in the manufacture of an agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IFN-alpha) in a system for inducing specific cytotoxic T cell (CTL) by administering an antigenic peptide in an incomplete Freund's adjuvant (IFN) emulsion preparation form was evaluated. IFNs (or inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is userious discretions discretions or a viral infectious disease Sequence 9 AA;

New peptides for recognizing cancer cells with tumor specific cytotoxic T lymphocytes and for treating cancer.

Claim 8; Page 2; 14pp; Japanese.

The present invention describes peptides recognising cancer cells with tumour specific cytotoxic T lymphocytes (CTL). The peptides recognising cancer cells with tumour specific CTLs are selected from: (1) peptides of sequences (AAG68066 to AAG68069); (2) peptides containing the above mentioned sequences; (3) peptides having 70 % or more of homogeneity with the above mentioned sequences; and (4) peptides with one or more deleted,

The invention relates to a composition (I) comprising an immune effector cell and a cell penetrating peptide (CPP) associated with an antigen or antibody. Also included are (1) a vaccine comprising (I), CPP associated with an antigen, and a pharmaceutically acceptable carrier and (2) preparing a composition for a disease, by providing (I) and CPP associated with an antigen for disease, and introducing the antigenassociated CPP to (I), where antigen enters into the cell. The antigenare, for example, tumour antigen derived epitopes recognised by tumour infiltrating lymphocytes (TIL) of HLA (human leukocyte antigen) class I or II. The composition is useful for enhancing immunity in an animal to a disease, by administering a mature dendritic cell comprising CPP associated with an antigen to disease, to the animal, such that following

·.
            sequences, particularly those having recognising property due to HLA-A2402 binding CTL, especially having at least 5 amino acids, used for medicine, particularly anticancer agents, derived from antitumour antigenic peptides of lck, src family, SART-1, SART-3 or cyclophilin B genes. The antitumour peptides have cytostatic activities. The peptides are used for the treatment of cancer. The peptides cause activation of CTL in cancer patients. The present sequence represents a peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         penetrating peptide; cancer; tumour; melanoma; thymoma; antigen;

The invention relates to a method for the detection of antigen specific T -cells in a blood sample involving the use of a plurality of antigenic peptides. The method comprises sampling of peripheral blood monocytes; stimulation of the collected peripheral blood monocytes with antigens without direct use of antigen presenting cells; and detection of T-cells specific to the antigen in the stimulated monocytes. The method is particularly used for the detection of cancer as it can be used in semicantitative determination of cancer specific T-cells. It can also be used for cancer vaccine therapy for patients with cervical or prostate cancer. The method can additionally be used to monitor of cellular immunity and cancer immune therapy by detection of specific T-cell frequencies. Sequences ABR84367-ABR84380 represent HLA-A24 (human leukocyte antigen) peptides of human origin used in an example from the invention
                                                                                                                                                                                                                                                                                                                                           0;
the administration, animal is protected from disease, where the animal comprises both CD4+ and CD8+ T cells. It is also useful for treating a disease (e.g. cancer, tumour, melanoma, thymoma, lymphoma, sarcoma, lung cancer, non-Hodgkin's lymphoma, leukaemia, Hodgkin's lymphoma, uterine cancer, cervical cancer, bladder cancer, kidney cancer, adenocarcinoma, breast cancer, prostate cancer, ovarian cancer and pancreatic cancer). The animal is further subjected to a cancer treatment including surgery, radiation, chemotherapy or gene therapy. The administration of (I), preferably dendritic cell is prior to, subsequent to or concurrent with, the cancer treatment. The present sequence is a tumour antigen derived epitope for inclusion in the composition of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigen specific T-cell; detection; diagnosis; cancer specific T-cell; cancer; tumour; cervical cancer; prostate cancer; cellular immunity; immune therapy; cytostatic; immunostimulant; vaccine; antigenic peptide; human; human leukocyte antigen; HLA-A24 epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A detection method of antigen specific T-cells, comprises the use of plural antigenic peptides, useful in semi-quantitative determination of cancer specific T-cell frequencies and for monitoring cellular immunity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to allergic reaction suppressors, comprising a peptide which originates from the same antigenic substance as the antigenic substance inducing the (peptide-originated) allergic reaction, and containing an epitope different from the epitope participating in the induction of the allergic reaction and yet dos not induce the allergic reaction. The desensitizers or allergic reaction suppressors are useful for treating and preventing type I allergic diseases and in cancer vaccines for preventing or treating cancer. The allergic reaction suppressors are also useful for suppressing an allergic reaction or reducing immunoglobulin E antibody production, and for desensitization to antigens. This sequence represents a peptide used in the invention and corresponds to amino acids 84-92 of the cyclophilin B protein.

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

novel hepatitis C virus subtypes 1d-f, 2e-i, 2k, 2l, 3g, 4k-m, 7a-c or types 9, 10 or 11 (see AATZ7937-TZ7989). The sequences corresp. to the 5' untranslated region (UR), the Core/El, NS4 or NS5B regions of the genome. This sequence is from the HCV subtype 9. The new HCV types were isolated from patients with chronic HCV from the Benelux countries, France, Cameroon and Vietnam, because of their aberrant reactivities. The RNA was extracted, cDNA synthesised and PCR amplified, cloned and genotyped. The 5'UR, Core/El and NS5B regions were sequenced either directly or partially and used to classify the new viruses into (sub)types based on comparison with known sequences. The nucleotide sequences can be used to synthesise probes and primers for the detection of HCV in a sample. The polypeptides can be used to detect anti-HCV antibodies, for HCV typing or to prevent HCV infections

Modified 3-hydroxy-3-methylglutaryl-coenzyme A reductase gene, useful for generating transgenic plants having increased isoprenoid production, comprising a modified phosphorylation site.

Claim 16; Page 18; 23pp; English

The present sequence is that of a phosphorylated region of the 3-hydroxy-3-methylglutaryl-coenzyme A reductase (HMGR) protein of potato. The invention relates to modified HMGR genes useful for generating transgenic plants having increased isoprenoid (especially sterol) production. The modified genes encode modified HMGR proteins, in which a phosphorylation site has been rendered inactive by replacing a Ser, Thr or Tyr residue with Ala or other amino acid residue. This reduces transcriptional regulation. The HMGR genes may be in the form of mutant plant and 

regulation can also be avoided by using heterologous promoters. Increased seed starol content has been demonstrated in transgenic plants. The seed starol content has been demonstrated in transgenic plants. The invention is used to produce plants having increased insect and mite pest resistance, particularly against species of Homoptera, Diptera, Clepidoptera, Coleoptera, Hemiptera, Dictyoptera, Orthoptera, Coleoptera, Coleoptera, Nemenoptera, Nemenoptera, Nemenoptera, Nemenoptera, Coleoptera, Nemenoptera, Downy mildews, Colletotrichum, Cochliobolus, Tapesia, Magnaporthe, Stagnospora, Rhynchosporium, Septoria, Helminthosporium, and powdery mildews such as Blumeria and Erysiphe. The modified genes are particularly useful in maize, wheat, rice, barley, oilseed rape, beans, sunflower, cabbage, potato, spinach, broccoli, pea, cauliflower, tomato, forest trees, roses and tea. The invention may also be used to add nutritional benefit such as fat-soluble vitamins E and K, and sterols to a crop plant Transcriptional plant/non-plant or different plant chimeric genes.

Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors. 

Claim 4; Page 61; 64pp; Japanese.

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

```
The invention relates to isolated Bacillus anthracis and small pox virus pebtides, also known as replikins, comprising 7 to 50 amino acids including at least one lysine residue located six to ten residues from a second lysine residue, at least one histidine residue, and at least 6% lysine residues. The peptides were identified using the 3-point.

Crecognition method and based on the replikin sequence isolated from glioblastoma cells malignin peptide which is of non-human origin. Also included are anti-replikin antibodies (or antibody cocktail), a method of stimulating the immune system of a subject to produce antibodies to Bacillus anthracis or more Bacillus anthracis or small pox comprising administering an effective amount of at least one or more Bacillus anthracis polypeptide (e.g. Anthrax Lethal Factor Protein pX01-07) comprising a replikin sequence, an antisense nucleic acid molecule complementary to a mRNA encoding a Small Pox Virus polypeptide (e.g. Surface Antigen S Precursor Protein comprising a replikin sequence. The produce antibodies that bind specifically to Anthrax or small pox provention comprising antibodies that can be used in the treatment and or prevention and or produce the peptides are useful for stimulating the treatment are useful for subject to produce antibodies that can be used in the treatment are useful for the preprides are usef
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated Bacillus anthracis and small pox virus peptides (I), also known as replikins, useful for formulating vaccines for treating anthrax or small pox, comprise 7 to 50 amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of anthrax or small pox. The peptides are also useful for formulating vaccines for treating anthrax or small pox. The present sequence is a replikin sequence isolated by the 3-point-recognition system and sharing structural similarity with the replikin sequence isolated from glioblastoma cells malignin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
